C程式設計題

命題者:潘韋誠						
題目名稱(中文/英文):用指令做四則運算 (CommandArithmetic)						
主要測試觀念: 字串應	,用					
Basics	Decisio	n and Loops	Functions			
 □ Keywords and Identifier □ Variables and Constants □ Programming Data Types □ Expressions □ Basic Input/Output □ Programming Operators 	☐ Programming ifelse ☐ Programming for Loops ☐ dowhile Loops ☐ break and continue ☐ switchcase Statement ☐ Programming goto		 ☐ User-defined Functions ☐ Function Types ☐ Programming recursion ☐ Storage Class (variable life) 			
Arrays and Strings	Po	inters	Structure and Union			
☐ Arrays ☐ Multi-dimensional Arrays ☐ Arrays and Functions ■ Strings and Functions	☐ Pointers And Arrays ☐ Pointers And Functions ☐ Dynamic Memory Allocations		☐ Structures and Pointers ☐ Structure and Function ☐ Programming Unions			
Files I/0	Misce	Miscellaneous Other				
□ Files Input/Output basics □ Enumeration □ Programming logic training □ Character I/O and String I/O □ Low level programming □ training □ Localization issues □ Localization issues □ Standard/advanced library □ □ Localization issues □ Localiz						
10 4011.	Sample Input	San	nple Output			
第一組測資與輸出	+123	6	•			
第二組	- 3 2 3	-2				
第三組	/ 4	4				
附屬資料: ☑解答程式: Command ☑測試資料:input.txt						
□易,僅需用到基礎程: ☑中,需用到多項程式設 □難,需用到多項程式: 等)	设計語法與結	構(如雙層迴				

解題時間	:	20 分鐘	0
其他註記	:
