C程式設計題

命題者:潘韋誠					
題目名稱(中文/英文): Find the largest one					
主要測試觀念: 迴圈應用					
Basics		Decision and Loc	pps Functi	Functions	
 □ Keywords and Identifier □ Variables and Constants □ Programming Data Types □ Expressions □ Basic Input/Output □ Programming Operators 		Programming ifelse Programming for Loops dowhile Loops break and continue switchcase Statement Programming goto	☐ User-defined Fu ☐ Function Types ☐ Programming rec	☐ User-defined Functions ☐ Function Types ☐ Programming recursion ☐ Storage Class (variable life)	
Arrays and Strings		Pointers	Structure a	Structure and Union	
☐ Arrays ☐ Multi-dimensional Arrays ☐ Arrays and Functions ☐ Strings and Functions		□ Pointers And Arrays □ Structures and Pointers □ Pointers And Functions □ Structure and Function □ Dynamic Memory Allocations □ Programming Unions		unction	
Files I/0		Miscellaneous	Othe	0ther	
☐ Files Input/Output basics ☐ Character I/O and String I/O ☐ Block I/O ☐ Advanced File I/O manipulations		Enumeration Preprocessor Low level programming Error handling Standard/advanced librar	☐ Programming str training ☐ Localization is	☐ Programming logic training ☐ Programming structure/design training ☐ Localization issues ☐	
題目說明:在生活中常常需要知道某堆數字裡面,最大的值是多少;請你寫出一個程					
式,來判斷最大值。					
輸入說明: 輸入一連串的數字(整數、浮點數都可以), 其中每個數字介於 0 到					
1,000,000 之間。					
輸出說明: 當輸入的值小於等於 0 時,則輸出所有輸入數字中的最大值,若前面沒有數字則輸出 Nothing IO 範例:					
		Sample Input	Sample Output		
	第一組測資與輸出	1 2 3 0	3.000000		
	第二組	9.5 8.7 1.11 9.65 -0.1	9.650000		
	第三組	-3	Nothing		

附屬資料:				
☑解答程式: FindMaximum.c				
☑測試資料:input.txt, output.txt				
☑易,僅需用到基礎程式設計語法與結構(如單迴圈等)				
□中,需用到多項程式設計語法與結構(如雙層迴圈等)				
□難,需用到多項程式結構或較為複雜之資料型態或結構(如遞迴、串連				
等)				
解題時間: 10 分鐘。				
其他註記:
